

CLAD-GARD™ SA-FR UNDERLAYMENT WITH NEW COREGARD™ TECHNOLOGY

UNMATCHED PROTECTION FOR YOUR BUILDING

Firestone Building Products is pleased to introduce the first of many products using our patented **CoreGard Technology**: CLAD-GARD™ SA-FR Underlayment with CoreGard™ Technology. This is **the only UL Class A underlayment on the market** today that brings water and fire protection to a whole new level. This one layer of underlayment out-performs the competition when it comes to keeping your building, and the occupants inside, safe.

Currently, you need additional material and labor to qualify for a UL Class A metal roof. With this product, you will **eliminate that additional cost** and still get the same, or better, quality waterproofing underlayment as the current Firestone CLAD-GARD underlayment products.

UL CLASS A FIRE PROTECTION

Installing a metal roof on your building does not give you a UL Class A roof. You must have a UL Class A system in order to have this rating. Many commercial buildings require UL Class A, especially in Educational, Medical, and Government facilities.

FEATURES AND BENEFITS

- Provides a UL Class A rated metal roofing system with one layer as opposed to multiple layers of competitive products
- A self-adhering, lightweight membrane that gives waterproofing protection keeping the contents of your building dry
- **>120 day exposure** allows this product to be installed even when the metal roofing products are not on-site
- Skid-resistant surface makes this product safe for installers when working on a sloped roof
- Significant cost savings on materials and labor due to a one-layer application as opposed to multiple layers to achieve UL Class A and waterproofing protection
- There is **no primer required** to install this product above 40 °F making it a quick and easy install
- Cost? Even if a UL Class A roof is not specified, you can provide the same UL Class A protection for the cost of a premium underlayment for roughly the same cost, which would be needed regardless

CORE  GARD™

A SUPERIOR, SINGLE LAYER OF PROTECTION

As the chart below shows, Firestone CLAD-GARD SA-FR Underlayment with CoreGard Technology is the only layer you will need over a combustible deck and under a metal roof to achieve a UL Class A standard. Competitive products do not offer this in a single fire retardant and waterproof layer of protection – giving this product a superior position in the marketplace.

- Simple as 1-2-3
 - Less time to apply
 - Fire retardant
 - Safety
1. Wood deck
 2. ISO
 3. CLAD-GARD SA-FR
 4. Metal panel

- Multiple layers and cost
1. Wood deck
 2. Competitor product
 3. ISO
 4. Underlayment
 5. Metal panel

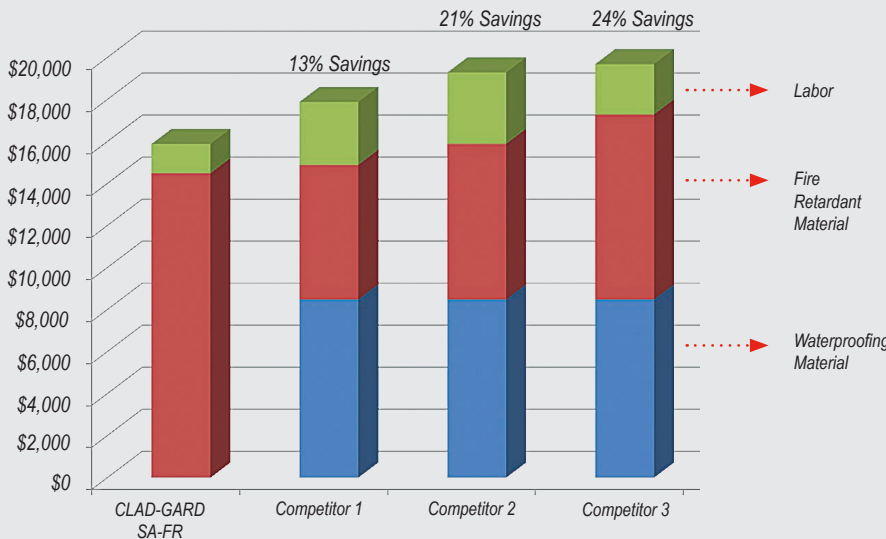

- Multiple layers of weight and rigid board
1. Wood deck
 2. Competitor product
 3. ISO
 4. Underlayment
 5. Metal panel

- Even more layers and cost
1. Wood deck
 2. Competitor product
 3. Competitor product
 4. ISO
 5. Underlayment
 6. Metal panel

COST SAVINGS

» Total savings advantage when using CLAD-GARD SA-FR compared to today's leading competitive Class A systems and waterproofing membranes
